Five Rivers Environmental Contracting Ltd

Heathland Woodland Wetland Creation Enhancement Restoration

"Five Rivers knew exactly what we were trying to achieve and completed the project superbly: the impact on the surrounding habitat was minimal." -

The Forestry Commission - wetland restoration.

Woodlands managed for wildlife are vulnerable habitats and need experienced contractors. Our experience and specialism includes selective felling or species removal, ride-widening, pollarding, coppice recovery and planting.

Helping you safeguard the environment for future generations

Five Rivers Environmental Contracting Ltd specializes in contracting and consultancy for nature conservation and habitat management, particularly in Sites of Special Scientific Interest (SSSIs). Nature conservation works are often difficult to specify and often cross normal disciplines. Our flexible approach, a team with wide-ranging skills, combined with careful and sensitive working methods help us to meet the challenging requirements of such projects.

Recent projects have seen us working on the enhancement of:

- rivers and lakes
- heathland
- wetlands
- water meadows and sluice systems
- chalk grassland
- woodlands

Five Rivers have completed a number of important wetland, lake and river projects, using high quality machinery and highly experienced, trained operators. We have taken great care to develop partnerships with a select number of plant-hire firms, so that we can call on the services of the most suitable machine and operator, for each specific task.

Five Rivers is experienced in the restoration and re-creation of lowland heathland habitats. Typical management objectives are to address the problems of invasive & alien species, eroded soils and the drainage of lowland valley mires. We also have specialist experience in the recovery of heathland from other land uses - such as conifer plantations.

We have considerable complementary experience in designing and building wooden structures (for example, bridges, fishing platforms, sluice gates and hatches); fencing; also in tree-surgery and pesticide application.

Whatever your project, we can bring our skills and expertise to bear right from the start. We'll be able to advise how to go about the project, the design of works, application for consents and to explore the potential for grants.

Come and talk to us about how Five Rivers can contribute to the management of your landscape project.
